Welcome to the pewag group

**We are an internationally
operating group of companies.
Our track record goes back
to the year 1479.**

Mission Statement

**pewag group's Mission Statement
expresses the goals of our actions as follows:**

Because of our joy and determination to innovate, we at pewag group strive to manufacture the world's best products wherever we compete – today and in the future. The high quality of our products and services, as well as the passionate performance of our employees are our biggest assets to reach excellence and total customer satisfaction.

Principles of pewag group

Leading in Quality

The values of our premium product brands are demonstrated by our first class quality and innovations and are communicated consistently and coherently.

We anticipate market demands and changes in the environment and adapt our strategies, organizations and actions accordingly to satisfy our customers' needs through providing the best value for the money; timely delivery; efficient and obliging service.

Leading in Responsibility

We commit ourselves to careful treatment of the environment, by reducing the use of energy and raw materials, ensuring the longevity of our products and making them recyclable.

We value an open, honest and team-oriented workstyle, which is based on transparent communication honoring ideas, opinions and experience of our employees as valuable inputs for our decision making process.

We strive for stable and fair partnerships with our employees, customers, suppliers and other business partners and take social aspects into consideration when making business decisions.

Leading in Technology

We secure our technological leadership through highest product quality, constant improvements and innovations of products, as well as manufacturing processes.

We are dedicated to keep on top of product technology. This ensures that our customers always have the best solutions available and that we expand and protect our market position.

Leading in Economics

In all our processes we use due diligent business practices and efficiency and strive to improve these continuously.

In the long-term, we will continuously increase our economic performance to raise corporate value, achieve sustained growth and thus secure a successful future of the organization.

We are a modern group of companies which looks back to a tradition and experience of more than 500 years. Since our founding years, a lot has changed, but the values that made our success possible from the beginning remain.

**pewag group –
Innovation. Quality. Partnership.**

History of the pewag group

Advantage through tradition

The history of pewag group goes back to the 15th century and therefore makes us the oldest chain manufacturer worldwide. With our experience we are ready for the future.

Timetable of important events

- 1479** First documented references of a forging plant in Brückl
- 1787** Foundation of a chain forge in Kapfenberg
- 1803** Foundation of a chain forge in Graz
- 1836** Establishment of an iron casting plant in Brückl
- 1912** Production of the first snow chain in the world
- 1923** Merger of plants in Graz and Kapfenberg –
Creation of the name “pewag”
- 1972** Foundation of a sales company in Germany
- 1975** Foundation of a sales company in the USA
- 1993** Foundation of pewag austria GmbH
- 1994** Foundation of the first subsidiary in Czech Republic
- 1999** Acquisition of the Weissenfels Group
- 2003** Separation from the Weissenfels Group
- 2005** Reorganization into 2 groups:
Schneeketten Beteiligungs AG Group – Snow Chains
pewag austria GmbH Group – Technical Chains
- 2009** Acquisition of Chaineries Limousines S.A.S.

Lithography forging plant Brückl 1855

Anchor chain forge 1878

Chain forgers 1956

Quality management

Our ultimate goal is to achieve customer satisfaction

To reach this goal, the quality management of the pewag group is determined by the principle: “We supply our customers with high-quality products which fully meet technological standards and its usage requirements,” this is summarized in the four following mandatory principles:

Market oriented quality

To maintain and improve its competitive position, the quality of products and services of the pewag group must meet both the specifications of our customers and the standards one can expect from the technological leader in the industry.

Economic quality

As a profit-oriented company, the quality is also determined by the material used, labour costs and financial possibilities, i.e. also within the framework awarded by the customer.

Responsibility for Quality

Quality management is the task and obligation of executives at all levels. Every employee of the pewag group has to be integrated by management in the preparations, execution and evaluation of the quality management measures.

Every employee takes the responsibility for the quality of his work.

Process oriented quality assurance

The close interaction between sales, product development, production and customer service is regulated within the individual companies by fixed processes and activities, as well as responsibilities with the aim to reach and maintain the defined quality standards.

Business areas

Working with pewag products

The pewag group has a substantial and diverse spectrum of products and services.

Our range of products varies from traction chains for tires (snow chains for passenger cars, trucks and special-purpose vehicles, tire protection chains for mining vehicles) over different industrial chains to products for the do-it-yourself sector (light chains, belts, etc.)

Segment A
Snow and forestry
chains

Segment B
Hoist and
conveyor chains

Segment C
Do-it-yourself

Segment D
Engineering

Segment F
Lifting and lashing chains
and accessories

Segment G
Tire protection
chains

Environment – we take responsibility

Ecological awareness in all areas

We continuously strive to keep the influence of our business on the environment as low as possible. Our production and warehousing is organized so that all legal requirements on environmental protection are fulfilled. Furthermore, we consider ecological aspects for our product development, processes and distribution channels and include these in our business planning.

Consequently, we are permanently striving for a continuous improvement and development of our established products to reach higher load capacities and safety for our customers with lighter weights and longer life spans.

Wherever we cannot avoid an environmental impact, we strive to reduce the use of energy, environmentally harmful emissions and keep the production of waste to a minimum. When investing in new machines, we consider the technically most adequate and economically feasible state-of-the-art designs for their designated area of use.

Our environmental management is certified according to ISO 14001:2004. Regular internal audits assist to supervise compliance, test the effectiveness of our set standards and serve as a basis to determine improvement potentials.

Out of this long-lasting tradition, we take responsibility for our products, employees, our sites and the environment very seriously.

We commit to comply with all environment-related regulations and continually improve our performance for the environment by defined goals. For that purpose, we use modern production technologies. We enhance the ecological awareness of our employees by regular trainings.

We engage with our customers, neighbours and government agencies in an open communication and inform them about our environmental management wherever appropriate.

By providing advice, we want to inform our customers about the environmental aspects related to the use of our products – especially their long life spans. We are striving to motivate our customers and suppliers to consider environmental protection in their sphere of influence and use the same environmental standards as we do.

Customer proximity

International presence

In the ambitious five-hundred year history pewag has evolved from a small and modest company to a global organization with several subgroups.

With 8 production and 26 sales and other locations on the continents of Europe, America and Africa pewag documented its claim as the world's number one chain manufacturer.

In addition to the numerous locations pewag as an international company relies on his capillary, strong, and professional partner network. These collaborations provide optimal customer service in currently more than 100 countries around the world.

Scraper Conveyors

pewag Scraper Conveyor Chains	12–14
Chain system with chain sprockets and pocket wheels	15–35

Scraper Conveyors

Overview

pewag Conveyor Chains

pewag – high quality Conveyor Chains

pewag conveyor chains are made from fine – grained, non – ageing special CrNi-, CrNiMo-, MnCr - alloyed steel. By ensuring optimum heat treatment pewag maintain high quality standards.

pewag conveyor chains have consistently high core quality which gives resistance to shock loadings and ensures maximum breaking loads and excellent fatigue strength can be achieved.

Case hardened conveyor chains can be used for operating temperatures of up to 200 °C (392°F) without loss of surface hardness.

The chains are manufactured with very close production tolerances to ensure a smooth, parallel run over the sprockets. All round steel chains and components are matched regarding to strength and uniform hardness, to minimize the wear and provide the greatest possible wear life and maximum chain life, to guarantee a long lasting chain system.

Extensive range of pewag conveyor chains up to 38 mm, chain couplings, chain sprockets, guide wheels, flight bars with flight attachments provide the optimum design for scraper conveyors in the bulk industry.

Cross section at the interlink point of contact

HV Round steel chains

HV-chains made from CrNi- or CrNiMo-special alloyed steel are suitable for scraper conveyors with high dynamic and static loads. Supplied as matched pairs – for an exact parallel run of the chain links.

Surface finish: polished and waxed

HV

Chain d x t	Chain with bi min.	Chain with ba max.	Weight	Standard length Links	Standard length L	G80 E10 Proof load	G80 E10 Breaking- load	G80 E14 Proof load	G80 E14 Breaking- load

Chain system with chain sprockets

highly wear resistant

Chain system with pocket wheels

highly wear resistant

KHV Chain couplings

Chain coupling for individual chain lengths HV and DSZ. The chain couplings have the same technological characteristics as the corresponding highly wear resistant chains. Pay attention that the couplings should be assembled and installed according to the instructions included in the packaging. These couplings can only be mounted as vertical links. Run over sprockets, pocket wheels, plain chain wheels with or without groove.

Surface finish: shotblasted and waxed

KHV

KHV Chain couplings	Type	KHV					
		d [mm]	t [mm]	a [mm]	b [mm]	c [mm]	Weight [kg/pc.]

RHV-A and RHV-AG Chain sprockets

Sprockets for use with HV and DSZ – round steel chains with replaceable and adjustable individual teeth, made from MnCr alloyed steel, case hardened – highly wear resistant. Sprockets are welded steel fabrications, any number of teeth or hub design is available. Keyways are machined in the hubs of matched wheels to ensure precise alignment of the teeth. Hub design, bore diameter and key size can be specified by the customer. Shimplates can be fitted to adapt the pitch circle dia. of the sprocket to a chain lengthened due to wear in the interlink points of contact. This ensures continued smooth running of the chain over the sprocket and the maximum use of the case hardened layer in the chain. Shimplates and new teeth can be mounted without disassembly the chain.

Chain sprockets RHV-A: with cleaning slots

Chain sprockets RHV-AG: with cleaning slots and tooth segments

RHV-A

RHV-A and RHV-AG Chain sprockets	Type	Chain d x t	No. of teeth Z*	Pitch circle-ø Dt [mm]	Weight appr. [kg/pc.]

* Any other number of teeth and sizes on request.

Hub length and hub diameter can be specified by the customer.

RHV-AG – style S1

RHV-AG – style S2

Hub

RHV-AG – style S1

RHV-AG – style S2

Sprocket tooth segments RHV-AG for existing hubs:

Style S1:

Individual teeth bolted to segmented disc

Style S2:

Individual teeth bolted into segmented disc

Required dimensions of the existing hub have to be specified.

Scope of delivery

Sprocket RHV-A with cleaning slots, replaceable and adjustable individual teeth and machined hub.

Sprocket RHV-AG with cleaning slots, 2 pcs. tooth segments with replaceable and adjustable individual teeth, machined hub, counter plate and mounting bolts and nuts.

Example of the order

2 pcs. drive sprockets RHV-A 22/10-86 - ready to install

for chain 22 x 86, No. of teeth $z = 10$

Hub length central $l = 160 \text{ mm}$ ($80 + 80$)

Hub bore dia. = 140 H7 and keyway acc. to DIN 6885

EHV Individual teeth

Individual EHV made from MnCr - alloyed steel, case hardened - highly wear resistant; surface hardness 800 HV10. The individual teeth can be adjusted with shimplates to adapt the pitch circle diameter of the RHV – sprocket to a chain lengthened due to wear in the interlink points of contact. This ensures continued smooth running of the chain.

Surface finish: shotblasted and waxed

EHV without shims

* Mounting parts: hex. socket head cap screw DIN 7984 - 8.8; spring washer DIN 127 and hex. nut DIN 934 - 8. Individual teeth with shimplates the screw length has to be advised.

EHV with shims

Scope of delivery

Individual teeth EHV with or without mounting screws and nuts

Example of the order

30 pcs. individual teeth EHV 22 x 86 – without mounting screws and nuts

IR Chain sprockets

Sprockets are welded steel fabrications either in one piece or with replaceable tooth segments for drive and tail sections; case hardened – highly wear resistant; fabricated steel sprockets can be provided for every medium and long chain pitch-tooth combination; any number of teeth available; hub design, bore diameter, and key size can be specified by the customer.

ULS

UL

UK

Example of the order

2 pcs. idler wheels ULR 22/550

for chain 22 x 86, pitch circle dia. = 550 mm

Offset hub: length l = 150 mm, length l1 = 100 mm

Hub bore dia. = 80 H7 and keyway acc. to DIN 6885

Scraper Conveyors

pewag Conveyor Chains as per works standard and components	38-47
--	-------

Scraper Conveyors

Chains and Components

Round steel chains for conveyors as per works standard

Round steel chains for conveyors with low conveying capacities and service hours, e.g. agricultural applications or cleaning scraper conveyors under belt conveyors etc; further special application are e.g. chains 8 x 25,4 G50 E7 electro galvanized in poultry processing plants.

Surface finish: up to chain diameter 11 mm natural black - oiled, polished and waxed or as specified by the customer

Proof/Breaking load tolerance -10% permissible depending on the batches.

Technical Datas

Chain length L production tolerance = $+0,3 / -0,15\% = 0,45\%$ total; this means that the difference between chain lengths of 10 m is max. 45 mm.

Chain length production tolerance ΔS of matched chain lengths is 0,05% or max. 3 mm for two or multiple chain strand conveyors.

Chain length tolerance ΔS of matched chain ends max. 0,5 mm.

Tolerance

for nominal diameter d: ca. $\pm 0,4\%$

for 1x pitch t: ca. 1,93%

for measured length 11 x t: ca. 0,48%

divided into +2/3 and -1/3

Example of the order

50 pcs. chains WN - A 8 x 31 G80 L = 281 links, supplied as matched pairs

VG Connecting links

Connecting link with closing plate and locking pin for chains;
run over pocket wheels as vertical mounted chain link; breaking
load as corresponding chain in quality G80.

Surface finish: PCP-coated

Any other sizes on request.

For all listed dimensions the usual cast tolerances are valid.

Model type

A full wheel without hub

B full wheel with hub on one side

C full wheel with hub on both sides

D plate body wheel with hub on both sides

E arm body wheel with hub on both sides

Scope of delivery

Pocket wheel, bore dia. and key size as specified by the customer

Example of the order

4 pcs. pocket wheels TR 8/9-31 GS 52

for chain 8 x 31, No. of teeth z = 9

Hub bore dia = 50 H7 and keyway acc. to DIN 6885

Assembly and Maintenance Instructions

Instructions and Questionnaire

Assembly of the drive and tail wheels

Pay attention to maintaining the correct chain center distance; Drive, guide and tail shafts must be installed parallel and all the wheels must be in line.

Recommended assembly of the chain lengths

- Connect individual chain lengths with connecting links
- Install the connected chain lengths into the conveyor trough
- Connect into an endless loop
- Assemble the flight attachments and flight bars
- Tension the assembled system

The chain lengths are supplied bundled in pairs. In order to avoid mixing up of the chain lengths, the wire for the bundling should only be opened in the course of the assembly; the chain lengths must be assembled in the conveyor lying parallel, this is the only way to guarantee that chain loops will be of the same length; if the chain lengths are mixed before installation the final links of every chain lengths are marked with the chain length number and are colour coded.

It is possible to get the chain lengths perfectly matched with the chain length numbers resp. the colour marking; during the assembly of the chain lengths please take care that the welds of the vertical chain links point to the wheel center. The position of the other links can be as required.

Pay attention that the chain couplings are installed in the correct position

Chain couplings KHV can only be mounted as vertical chain links for all conveyors and chain systems.

Connecting links VHV are mounted as vertical or horizontal chain links and the locking lash with the marking must point outwards but only as horizontal

chain links with horizontal and additional inclined conveying sections with sprockets.

Shortening of the chain may be necessary to shorten the chain in order to obtain the exact required chain length of the make – up lengths, or if the chain lengthens due to wear. If chain shortening is necessary an even number of chain links (2, 4, 6, and so on) must be cut out from both chain loops. Links must be cut out with a cutting disc or a burner. Pay attention not damage or overheat the neighboring links.

The pitch circle dia. of the sprocket RHV is adapted with shimplates to the individual teeth. Shimplates and new teeth can be installed without disassembly the chain. The thickness of the shimplates can only be determined by measuring the chain lengthened due to wear. As soon as the case hardened layer is worn off the wear will increase rapidly. Chains and sprocket teeth will wear out under normal operating condition at the same time.

Shimplates should be fitted when the chain is lengthened due to wear by approx. 2,5%. The replacement of the chain is recommended with the quality grade E10 by a chain wear of approx. 3,5% and quality grade E14 by 5%.

Pay attention to a uniform charging over the full trough width of the conveyor. Both chain loops must be equally loaded due to conveying material and chain tractive forces. Asymmetric loading on the chain loops lead sooner or later of an increase in pitch due to wear and to slanting flight bars.

The conveying speed should be adjusted to the conveying capacity so that a maximum loading of the flight bars is achieved.

The chain tension must be checked regularly, especially during commissioning of new chains to check the elongation of the chain due to wear.

Basically, the chain tension should only be as high as necessary for trouble-free operation. Both chain loops must be equally tensioned. Excessive tension will increase the chain wear rate and will reduce the chain life.

Thread size	Nm	Lbf/ft.
M 6	10	7

M 36	2.450	1.772

Tightening torque Nm and Lbf/ft for bolts and hex. nuts strength class 8.8 and 8,
Overall Friction Coefficient of $\mu = 0.14$

Conveyors designed with long sections of unsupported round steel chains require very high pre-tensioning loads. This can be avoided by supporting the chain with guide rails.

Densely packed material may cause the chain to disengaging from sprockets or idler rollers. To prevent this strong rigid chain guide assemblies should be located before, after and around the contact points of changes in chain travel.
