

EXPO 2015, Milan, Italy

2015

Roofs

Owner / Client

Tensaccai Srl., Milan

Design / Engineering

Maffeis Engineering, Solagna

Description

PFEIFER tension members span the 1.3 km access central axis of the Expo in Milan. This is the largest order for tension rods in PFEIFER's history.

Almost the whole range of our tension rods from M12 to M90, were installed. The large adjustment paths of PFEIFER - Tension Rods enabled the desired adjustment without any additional connectors or adapters. The site assembly and installation of the tension rods was supervised by our experienced technicians.

1 Intersection Tension Rod System and base
